Vocabulary

IT is computers or something that has been made to work with computers. E.g. laptops or smart boards.

Technology is changing all the time and this means somethings have multiple categories. E.g. printers have a computer inside them meaning they can work with a computer and also on their own.

We use IT devices a lot in school such as smart boards, iPads and teacher laptops.

We can find IT devices outside of school such as in shops. Shops use barcode scanners and lots of people use IT in their workplaces.

Technology has meant we can work together more and there are lots of benefits to using IT.

It is really important to use IT safely and understand the people you can talk to if you feel unsafe online (parents, teachers).

Having a balanced online life is important and this means not using technology too much whilst still understanding the benefits of IT.

Device - Can be used for to complete IT tasks on.

IT - Information Technology, basically a computer or something made to work with computers.

Computer - A type of machine, it doesn't have a brain like us but it can follow instructions.

Technology - Use of knowledge to invent new devices or tools.

E Safety - How to keep you and others safe when online.
