Vocabulary

Websites are created using HTML which is the coding used for a website.

It is important to remember that websites have numerous ways of displaying data.

It is important when using images that they are copyright free.

When creating a website, you need to consider how it will appear on different devices (laptop, phone and iPad).

Websites link together different pages by using hyperlinks.

**Website** - set of related webpages under the domain of one address e.g. bbc.co.uk

**Browser** - application for accessing websites e.g. Google Chrome.

**HTML** - coding used within a website.

**Layout** - how something is presented.

**Copyright** - giving the owner protection against use of their property.

**Home page** - the first page of a website.

**Breadcrumb trail** - series of connected information.

**Hyperlink** - link to another destination.

**Embed** - to insert into.
