Vocabulary

The internet is a global network of networks.

The purpose of routers is to connect networks together, send information around the internet and to choose the quickest route for information. They don't keep networks safe or store information.

The internet is connected by lots of routers. The World Wide Web is part of the internet where we can visit websites and web pages.

On the World Wide Web we can share sounds and sights.

Different websites have different domains e.g. .gov is a government website and .fr is a website from France.

We also use web browsers to see web pages, this isn't like Google. Web browsers include Chrome, Firefox and Edge.

Web browser - Software that allows us to see web pages.

Web pages - A hypertext document on the World Wide Web.

World Wide Web - All the web pages on the internet, accessed using a browser.

Internet - Global network of networks.

Router - A device used to connect devices to the internet. Can be wired or wireless.

Network - A group of computers that are connected.

Web server - A computer connected to the internet that provides access to websites.
